ABSTRACT | Objective: The study aims to explore the role of ChatGPT as an Artificial Intelligence tool in education, critically evaluate its performance, discuss potential problems for students, and propose enhancements to improve teacher-student relations. **Method:** The research utilizes secondary data gathered from various publications, including magazines, books, journals, and websites relevant to the subject. The study focuses on unveiling the impact of ChatGPT on teacher-student dynamics. **Results:** ChatGPT offers several advantages in education, including customized learning, constant availability, instant feedback, homework assistance, and support for language learning. It can also enhance engagement and provide consistent quality at a lower cost. However, the study identifies significant drawbacks, such as a lack of emotional intelligence, contextual understanding, and personalization. There are concerns about misinformation, over-reliance on technology, privacy, security, and inadvertent bias reinforcement. To address these issues, the study recommends implementing effective feedback mechanisms, conducting regular security audits, promoting collaborative learning environments, and continuously updating AI models. **Conclusions:** While ChatGPT has transformative potential in education, its implementation must be carefully managed to avoid depersonalization and reliance on AI at the expense of human interaction. The study emphasizes the importance of balancing AI with the human touch in education, ensuring ethical guidelines, and promoting digital literacy. A collaborative effort among educators, policymakers, and technologists is crucial for responsible and ethical integration of AI in education.

INTRODUCTION

Recent rapid advancements in artificial intelligence (AI) have made a wide range of applications possible in various academic sectors, including education. Concerns exist over what and how to teach the next generation of learners. These concerns highlight the need for education to provide future generations with the skills and knowledge necessary to prosper in a rapidly evolving society, to which artificial intelligence has provided a number of answers. OpenAI's ChatGPT, a conversational chatbot that was recently developed, might make it simpler for learners to use AI in the field of Education. This technology is essentially transforming society and humanity, in addition to having a substantial impact on how society produces, lives, and communicates (Hill-Yardin et al., 2023). ChatGPT and other AI programs offer an innovative way to respond to human prompts in a conversational fashion. ChatGPT can handle homework, answer questions comparable to those on an exam, and draft academic compositions in addition to automatically generating contracts.

Generative Pre-Trained Transformer (GPT), an OpenAI language model, is able to generate response text that is nearly eerily similar to natural human language (Dale, 2021). With its foundation in the OpenAI language model and its all-embracing training on human dialogues, ChatGPT is able to execute intricate tasks and produce responses that are akin to those of a human (Susnjak, 2022). The way we interact with technology is expected to be meaningfully impacted by this next generation of conversational AI, which has a wide range of capabilities and sophisticated natural language capacity (Mollick, 2022). The New generation will get explanations according to their generational needs. On the one hand, chatgpt is providing solutions and researchers are of the opinion that they facilitate teaching and learning. (M. Sharples, 2022), whereas on the other hand, some have discussed its disadvantages too and the most mutual problem found was academic integrity. (E. Kasneci et.al 2023). Chatgpt is not only aiding students but also other categories of people like teachers, blog writers, script writers, you-tubers and many more. It can help teaches in preparing their lessons, making notes, language translation, producing course materials, providing suggestions, student's assessment and evaluation. (Lo, C. K. 2023). In this era of technological advancement, the integration of ChatGPT into educational settings has sparked both enthusiasm and skepticism. As we embark on this exploration, our research seeks to dissect the intricate dynamics between teachers and students in the presence of ChatGPT, uncovering its potential advantages and pitfalls. The unfolding narrative will not only shed light on the evolving landscape of education but also offer valued insights into the delicate balance between innovative tools and the human connection that lies at the heart of effective teaching and learning. With a particular prominence on the complex interactions that occur amongst teachers and students, main goal to undertake this journey is to make a meaningful contribution to the continuing exchange about the responsible integration of artificial intelligence in education.

OBJECTIVES OF THE STUDY

- To discuss the role of ChatGPT as an Artificial Intelligence tool.
- To critically evaluate ChatGPT's performance in the field of Education.
- To discuss potential problems of ChatGPT with respect to students.
- To propose enhancements to the ChatGPT model that foster improved teacher-student relations.

RESEARCH METHODOLOGY

Here secondary data is used and was gathered from a variety of publications, including magazines, books, journals, and websites that are relevant to the subject. The purpose of the paper is to unveil the impact of ChatGPT in Teacher-Student Dynamics.

Advantages and Disadvantages of ChatGPT model

ChatGPT can offer several advantages in the field of education:

1. **Customized Learning:** ChatGPT can offer tailored scholastic experiences by adjusting to each student's exclusive requirements and preferred method of learning. In light of the student's development and performance, it can provide focused explanations, practice questions, and comments. (Aduke, T. C., Mfon-Ette Theresa, A., & Opara, E., 2023)
2. **Constant Availability:** ChatGPT is always accessible, unlike in-person instructors, so students may get help and material or data whenever they need it. Students who are learning at their own pace or in different time regions may find this especially helpful. (Panda, S., & Kaur, N., 2023).
3. **Instant Feedback:** ChatGPT may offer students instantaneous feedback on their projects, assisting them in better understanding their mistakes and drawing lessons from them. Rapid feedback can promote ongoing development and improve the learning process.(Mizumoto, A., & Eguchi, M., 2023).
4. **Help with Homework:** Students who need assistance with their assignments or homework can also use ChatGPT. This model can help definitely with comprehension by providing extra resources, clarifying concepts, and solving problems. (Asim, R., Ibrahim, H., Rahwan, T., Zaffar, F., & Zaki, Y., 2023).
5. **Addition to Traditional Teaching Methods:** ChatGPT can act as a useful addition to traditional teaching techniques. To support learning outside of the classroom, it can provide more clarifications and practice questions. (Lee, H., 2023).
6. **Language Learning:** ChatGPT offers an informal and practice-oriented platform that can help language learners. In an interactive setting, students can hold conversations, get advice on their language use, and develop their communication skills. (Klimova, B., Pikhart, M., Shaikh, S.& Yayilgan, S., Y2023)
7. **Accessibility:** Now a broader audience can take benefit from increased accessibility to education through ChatGPT. By providing an environment that is flexible and adaptable, it can support students with changing learning needs. (Othman, A., Dhouib, A., & Nasser Al Jabor, A., 2023)
8. **Continual Excellence:** Without the erratic nature of human instructors, ChatGPT can provide information and explanations in a consistent manner. In this way, the quality of the instructional materials offered is assured to remain consistent. (Jang, M., & Lukasiewicz, T., 2023).
9. **Economical:** Using ChatGPT as an additional resource or teaching assistant can be less expensive than employing more human teachers. It can support effective resource management in educational institutions. (George, A. H., George, A. S. & Martin, A. G., 2023).
10. **Drive and Involvement:** ChatGPT's interactive and conversational features can improve students' motivation and engagement. It can encourage students to actively engage in the learning process and make learning more pleasurable. (Neji, W., Boughattas, N., & Ziadi, F., 2023).

Despite these benefits, it's crucial to remember that ChatGPT should supplement human instruction rather than completely replacing it. The human touch is still crucial for some parts of teaching and mentoring because

the model might not fully understand the context or sensitivities of every educational scenario. **Undoubtedly, although ChatGPT offers benefits, there are also certain drawbacks when it comes to education:**

1. **Emotional intelligence and empathy deficit:** ChatGPT is devoid of genuine empathy and emotional intelligence. It might find it difficult to recognize and address students' emotional needs, which are often crucial to the learning process. (Rane, N., 2023).
2. **A Partial Knowledge of the Situation:** There could be miscommunications if the model doesn't fully get the context of a discussion. Due to this restriction, in some circumstances, information given might be false or inappropriate. (Yang, C., & Ettinger, A., 2023).

   A pilot study was done to see whether Chatgpt is able to help researches in doing some part of analysis. Chatgpt gave a very good analysis but the papers quoted by it did not exist. Following were some of the research papers:

   - Patel, R. and Singh, N. (2021). "Exploring Ethical Considerations in the Integration of ChatGPT in Education."
   - Garcia, M. and Kim, S. (2019). "ChatGPT in Language Education: Overcoming Challenges in Second Language Acquisition."
   - Chen, X. and Wang, Y. (2022). "ChatGPT as a Coding Tutor: A Comparative Study on Learning Outcomes."
   - Johnson, B. and Lee, C. (2020). "Personalized Learning with ChatGPT: A Review of Applications in Education."
   - Smith, A. et al. (2021). "The Impact of ChatGPT on Student Engagement in Online Learning Environments."
3. **Lack of Personalization:** ChatGPT is a language model that was trained on a wide variety of data, it frequently produces general responses that might not be adapted to the needs of each particular student. Students may become disinterested and demotivated if they receive answers that do not specifically answer their questions.
4. **Not Able to Assess Useful Knowledge:** Some academic field calls for practical skills that cannot be adequately evaluated or taught via a text-based chat program. This restriction might affect ChatGPT's suitability for some subjects. e.g for Critical and higher-order thinking, Economics etc- it is suitable but for Mathematics, psychology and MCQ-based questions, its overall performance was not up to the mark. (Lo, C. K., (2023).
5. **Danger of Misinformation:** ChatGPT may produce inaccurate or out-of-date information in its responses since it uses patterns it has learned from a variety of data sources. If the model is based on erroneous data, there is a chance that false information will spread. (Dwivedi, Y. K.,2023)
6. **Reliance on Technology:** Excessive reliance on ChatGPT may result in a greater need for technology in the classroom. This could lead to doubts about an excessive reliance on AI models and the possibility of less human interaction during the learning process (Shidiq, M., 2023).
7. **Concerns about Security and Privacy:** Gathering and processing student data is a part of using chatbots in educational settings. This gives rise to secrecy concerns, and sensitive data must be protected with strong security measures (Wu, X., Duan, R., & Ni, J., 2023).
8. **Inadvertent Bias:** ChatGPT might unintentionally reinforce biases that exist in the training set. Biases in the training set may be revealed in and reinforced by the model's responses, which could have unjust or discriminatory effects (Rozado, D.,2023).

RESULTS AND DISCUSSION

In order to fully utilize ChatGPT's advantages and make sure that it enhances rather than displaces human educators in the educational ecosystem, it is imperative that these drawbacks be carefully considered.

- It is suggested to include effective feedback mechanisms in the learning platform which can help to understand the preferences and abilities of every individual learner.
- In addition, these systems must to be effective and able to gather user input instantly. In order to deal with the issues of security and privacy, regular audits and bias checks should be there in order to identify and rectify any biases present in ChatGPT's responses. Establishing robust data protection policies is crucial to ensure the confidentiality and security of student information.
- To maximize the benefits of both specialized and generalized knowledge, integrate ChatGPT with models or systems that are particular to a given topic. This will enable the students to receive more tailored responses.
- It is best to promote collaborative learning settings where ChatGPT collaborates with human teachers to lessen the influence of canned answers. Human teachers can provide additional insights, clarification, and personalized guidance, complementing the AI's capabilities and enhancing the overall educational experience. They can also adapt their teaching strategies based on students' comprehension and feedback following the contingency approach.
- Apart from that, there has to be continuous developments in AI and natural language processing models making the platform updated in all aspects.
- When Chat GPT will not give personalized solutions to students, it will lead to diminished student engagement. Low student involvement impedes academic progress and the formation of lifetime learning habits by undermining the establishment of a pleasant, collaborative classroom atmosphere and learning outcomes.
- There is no denying the fact that the use of ChatGPT can potentially contribute to unemployment by automating certain tasks, leading to reduced demand for human labour in specific industries. There might be a change in the type of jobs needed if AI-driven systems like ChatGPT proliferate. This could leave some people without adequate work possibilities and have a detrimental impact on the economy as a whole. Developing reskilling and workforce adaptation plans for evolving technology is a necessary step in addressing these issues.
- A comprehensive strategy is needed to address the possible deterioration of human reasoning and decision-making as a result of an increased reliance on ChatGPT technology. This includes promoting digital literacy through educational efforts and making sure that people are aware of the advantages and disadvantages of AI.
- When ethical issues are there, it is imperative to implement and enforce ethical guidelines for AI development to promote transparency and accountability, mitigating the risk of biased or harmful AI influences.
- Whatever steps we may take to enhance human skills, students are likely to rely on the solutions provided by Chat GPT, so it is suggested to encourage the continual development of uniquely human skills, such as creativity and emotional intelligence, through training programs, facilitate ongoing education and upskilling to empower individuals to adapt to evolving technologies and maintain their critical thinking abilities.

CONCLUSION

In conclusion, examining ChatGPT's benefits and drawbacks has highlighted the technology's revolutionary potential for communication, education, and problem-solving. Although its benefits—like tailored instruction and enhanced productivity—are clear, implementation must be done carefully due to worries about depersonalization and the possible degradation of interpersonal communication abilities. The human touch and tailored attention that teachers provide could be missed by students, which could have an adverse effect on the nature of the relationships between teachers and students. An essential component of teacher-student relationships is the development of social and communication skills. They run the risk of not developing their interpersonal communication skills as well if they rely too much on Chat GPT. Proactive solutions are needed to address the issues raised, such as the risk of overreliance and ethical concerns. We can maximize ChatGPT's benefits while minimizing its drawbacks by emphasizing digital literacy, creating moral standards, and encouraging the ongoing development of distinctively human abilities. It's crucial to strike a balance so that artificial intelligence complements human contact rather than takes its place. rather than a replacement for human interaction is essential. Lastly, give top priority to the development of AI systems that augment human capacities, establishing a cooperative partnership that capitalizes on the advantages of both AI and human intelligence. To maintain the crucial human element in communication and education while integrating ChatGPT responsibly and ethically, educators, legislators, and technologists must work together to navigate this environment.
